What Is Ansible:

- A Software tool For Automation Of Cross-Platform Servers
- its Example Of Configuration Management Tools

Why We Need Ansible?

- Existence Of Many Servers.
- Don't Make Access For Every Users
- Repetitive Works
- Self-Documentation

Action of Server Admin With Ansible:

- Server Management
- Deploy And Install Applications
- Change Configurations
- Management Services
- Update Services

Benefit of Ansible:

- Simple
- Agentless
- Powerful And flexible

Note:

- Ansible Does not Need Database And Service And Just Need Python
- Ansible works on Every Platform But Controller Node Should Be on linux(All Kind) And Can not Be Windows
